

IN THE CLAIMS:

Please amend the claims as follows:

1.(Currently Amended) A system for monitoring lithography lasers at at least one integrated circuit fabrication plant, said system, comprising:

- A) a plurality of lasers each being configured for use as illumination sources in an integrated circuit lithography process,
- B) a terminal server associated with each one of said plurality of lasers;
- C) a central fabrication plant server unit in communication through a local area network with each of said plurality of lasers through the respective terminal server; said central fabrication plant unit being programmed to acquire data from each of said lasers and to store at least portions of the data in raw form and/or summary form;
- D) a second server unit providing communication through a communication network between said central fabrication plant ~~first~~ server unit and computers utilized by persons having access authorization to the information stored by said [~~first~~] central fabrication plant server unit.

2. (Currently Amended) A system as in Claim 1 wherein said plurality of lasers are narrow band gas discharge ~~excimer~~ lasers.

3.(Original)A system as in Claim 1 wherein each terminal server is provided with a unique internet address.

4. (Currently Amended) A system as in Claim 1 wherein said second server is located at a facility[ies] [~~y~~]of a laser manufacturer.

5. (Original) A system as in Claim 1 wherein said central fabrication plant server unit is programmed with software is selected from a list created in modular form said software comprising:

- (a) a data acquisition module
- (b) a parser module
- (c) a database module and
- (d) a user interface module.

6. (Original) A system as in Claim 5 wherein said data acquisition module comprises software components selected from a list comprising:

- (a) laser read and write
- (b) command write to lasers
- (c) command write queue
- (d) data read from lasers
- (e) master scheduler
- (f) interface to parser
- (g) database write queue
- (h) system error logs and error daemon

7. (Original) A system as in Claim 1 wherein data acquired from said lasers is presented at a web site created by said central fabrication plant server unit:

8. (Original) A system as in Claim 7 wherein said data acquired from said laser is presented in the form of summary charts.

9. (Original) A system as in Claim 7 wherein said web site comprises web pages.

10. (Original) A system as in Claim 9 wherein said web pages are selected from a list compris[e][ing]:

- (a) an administration page
- (b) summary pages regarding particular lasers
- (c) service log pages
- (d) error pages

11. (Original) A system as in Claim 8 wherein said charts are selected from a list compris[e][ing]:

- (a) chamber lifetime charts
- (b) LNM charts
- (c) Stabilization module charts
- (d) Uptime or downtime charts
- (e) Maintenance related charts

12. (Currently Amended) A system as in Claim 1 wherein said communication network [is] comprises the Internet

13. (Currently Amended) A system as in Claim 1 wherein said communication network [is] comprises an intranet system.

14. (Currently Amended) A system as in Claim 1 wherein said terminal server [is] comprises an embedded network card.

15. (New) A system for monitoring lithography lasers at at least one integrated circuit fabrication plant, said system, comprising:

- A) a plurality of lasers each being configured for use as illumination sources in an integrated circuit lithography process,
- B) a terminal server associated with each one of said plurality of lasers;
- C) a central fabrication plant server means in communication through a local area network with each of said plurality of lasers through the respective terminal server; said central fabrication plant means server being programmed to acquire

data from each of said lasers and to store at least portions of the data in raw form and/or summary form;

D) a second server means providing communication through a communication network between said central fabrication plant server means and computers utilized by persons having access authorization to the information stored by said central fabrication plant server means.

16. (New) A system as in Claim 15 wherein said plurality of lasers are narrow band gas discharge lasers.

17.(New) A system as in Claim 15 wherein each terminal server is provided with a unique internet address.

18. (New) A system as in Claim 15 wherein said second server means is located at a facility of a laser manufacturer.

19.(New) A system as in Claim 15 wherein said central fabrication plant server means is programmed with software created in modular form said software **selected from a list** comprising:

- (a) a data acquisition module
- (b) a parser module
- (c) a database module and
- (d) a user interface module.

20. (New) A system as in Claim 19 wherein said data acquisition module comprises software components **selected from a list** comprising:

- (a) laser read and write
- (b) command write to lasers
- (c) command write queue
- (d) data read from lasers
- (e) master scheduler
- (f) interface to parser
- (g) database write queue
- (h) system error logs and error daemon

21. (New) A system as in Claim 15 wherein data acquired from said lasers is presented at a web site created by said central fabrication plant server means.
22. (New) A system as in Claim 21 wherein said data acquired from said lasers is presented in the form of summary charts.
23. (New) A system as in Claim 21 wherein said web site comprises web pages.
24. (New) A system as in Claim 23 wherein said web pages **are selected from a list** comprise:
- (a) an administration page
 - (b) summary pages regarding particular lasers
 - (c) service log pages
 - (d) error pages
25. (New) A system as in Claim 22 wherein said charts **are selected from a list** comprise:
- (a) chamber lifetime charts
 - (b) LNM charts
 - (c) Stabilization module charts
 - (d) Uptime or downtime charts
 - (e) Maintenance related charts
26. (New) A system as in Claim 15 wherein said communication network comprises the Internet
27. (New) A system as in Claim 1 wherein said communication network comprises an intranet system.
28. (New) A system as in Claim 1 wherein said terminal server comprises an embedded network card.

29. (New) A method for monitoring lithography lasers at at least one integrated circuit fabrication plant, said **method**, comprising the steps of:

- A) using a plurality of lasers as illumination sources in an integrated circuit lithography process,
- B) providing a terminal server associated with each one of said plurality of lasers;
- C) utilizing a central fabrication plant server unit in communication through a local area network with each of said plurality of lasers through the respective terminal server; to acquire data from each of said lasers and to store at least portions of the data in raw form and/or summary form;
- D) utilizing a second server unit to provide communication through a communication network between said central fabrication plant server unit and computers utilized by persons having access authorization to the information stored by said central fabrication plant server unit.

30. (New) A method as in Claim 29 wherein said plurality of lasers are narrow band gas discharge lasers.

31. (New) A method as in Claim 29 wherein each terminal server is provided with a unique internet address.

32. (New) A method as in Claim 29 wherein said second server is located at a facility of a laser manufacturer.

33. (New) A method as in Claim 29 wherein said central fabrication plant server unit is programmed with software created in modular form said software is **selected from a list** comprising:

- (e) a data acquisition module
- (f) a parser module
- (g) a database module and
- (h) a user interface module.

34. (New) A method as in Claim 33 wherein said data acquisition module comprises software components **are selected from a list** comprising:

- (a) laser read and write
- (b) command write to lasers
- (c) command write queue
- (d) data read from lasers
- (e) master scheduler
- (f) interface to parser
- (g) database write queue
- (h) system error logs and error daemon

35. (New) A method as in Claim 29 further comprising presenting the data acquired from said lasers at a web site created by said central fabrication plant server unit.

36. (New) A method as in Claim 35 further comprising presenting data acquired from said laser in the form of summary charts.

37. (New) A method as in Claim 35 wherein said web site comprises web pages.

38. (New) A method as in Claim 37 wherein said web pages **are selected from a list** comprising:

- (a) an administration page
- (b) summary pages regarding particular lasers
- (c) service log pages
- (d) error pages

39. (New) A method as in Claim 36 wherein said charts **are selected from a list** comprising:

- (a) chamber lifetime charts
- (b) LNM charts
- (c) Stabilization module charts
- (d) Uptime or downtime charts

(e) Maintenance related charts

40. (New) A method as in Claim 29 wherein said communication network comprises the Internet

41. (New) A method as in Claim 29 wherein said communication network comprises an intranet system.

42. (New) A system as in Claim 29 wherein said terminal server comprises an embedded network card.

43. (New) The apparatus of Claim 1 further comprising the central fabrication plant server means and the plurality of terminal servers are contained inside of at least one network at firewall maintained by the operator of the integrated circuit lithography process; and, the second server is contained inside of at least one network firewall maintained by a manufacturer of the lasers.

44. (New) The apparatus of Claim 15 further comprising the central fabrication plant server means and the plurality of terminal servers are contained inside of at least one network at firewall maintained by the operator of the integrated circuit lithography process; and, the second server is contained inside of at least one network firewall maintained by a manufacturer of the lasers.

45. (New) The method of Claim 29 and further comprising the central fabrication plant server means and the plurality of terminal servers are contained inside of at least one network at firewall maintained by the operator of the integrated circuit lithography process; and, the second server is contained inside of at least one network firewall maintained by a manufacturer of the lasers.

46. (New) The apparatus of Claim 1 further comprising the central fabrication plant server unit is programmed with a data acquisition module.

47. (New) The apparatus of Claim 46 further comprising the data acquisition module comprises components selected from the list including:

- a) laser read and write;

- b) command write to lasers'
- c) command write queue;
- d) data read from lasers;
- e) master scheduler;
- f) interface to parser;
- g) database write queue;
- h) system error log; and
- i) error daemon.

48. (New) The apparatus of Claim 15 further comprising the central fabrication plant server means is programmed with a data acquisition module.

49. (New) The apparatus of Claim 48 further comprising the data acquisition module comprises components selected from the list including:

- a) laser read and write;
- b) command write to lasers'
- c) command write queue;
- d) data read from lasers;
- e) master scheduler;
- f) interface to parser;
- g) database write queue;
- h) system error log; and
- i) error daemon.

50. (New) The method of Claim 29 further comprising the central fabrication plant server unit is programmed with a data acquisition module.

51. (New) The method of Claim 50 further comprising the data acquisition module comprises components selected from the list including:

- a) laser read and write;
- b) command write to lasers'
- c) command write queue;

- d) data read from lasers;
- e) master scheduler;
- f) interface to parser;
- g) database write queue;
- h) system error log; and
- i) error daemon.
